

B-Line

Here comes
the Boom.

s)))e[®]
AUDIOTECHNIK

Lows at the highest level.

In a world of sound with B-Line subwoofers, every note is experienced with precision and astonishing depth. With their impressive sound spectrum, B-Line subwoofers create an acoustic experience that is not only heard, but also felt. The boom of the B-Line creates an unforgettable sound experience.

boom.se-audiotechnik.de

Truly hits every note.

The B-Line subwoofers master every challenge with flying colours. From gentle lows to powerful bass, they hit every note with exceptional clarity and precision. Their technological sophistication ensures unrivalled sound quality that captivates every listener.

Strong values.

From 27 Hz

Subkontra-A: Down to the lowest frequency range B-Line subwoofers even reproduce the A2 of a concert grand piano authentically.

Up to 139 dB

Musical: With a maximum PEAK SPL of up to 139 dB, there is enough room for great dynamics.

1,600 W

Great power: With a customised integrated amplification with 1,600 watts, there is enough power for any application.

55 kg

Harmony: Perfect combination of weight, stability and size. With ergonomic handles, dollyboard and transport protection, B-Line subwoofers are always easy to handle.

Technical values of the B-Line B 21A subwoofer.
The values may vary depending on the model.

Pure sonic power.

B-Line subwoofer for unrivalled flexibility and top sound. Ideal for any event, our subwoofers promise easy operation and harmonious integration with SE AUDIOTECHNIK systems.

Simple and Flexible.

The B-Line subwoofers in the sizes 15", 18", and 21" are available in both passive versions and with integrated DSP amplifiers. Their simple handling, easy transportability, and maximum flexibility allow them to be used as a ground stack, bass extension, or bass array. And with the B 15A FS, flown bass arrays can also be realised.

Great Sound.

The B-Line subwoofers combine a compact design with practical features and modern technologies for dynamic and authentic low-frequency sound reproduction. The DSP amplifier enables easy and quick alignment with point sources and line arrays as well as convenient setup of various bass arrays.

Optimally Tuned.

The B-Line from SE AUDIOTECHNIK guarantees an impressive and transparent sound together with our SE AUDIOTECHNIK loudspeaker systems. The B-Line can be combined with the CV-Line, COX-Line, L-Line, M-Line, and SMX-Line to form a monitoring system, mobile PA system, or installation system. The systems are easily scalable and modular.

Flying high.

The B-Line opens up a new dimension of sound installation - flying and free. The flyable subwoofers not only offer outstanding performance on the ground as a ground stack, but also deliver impressive bass in the air. Perfect for all setups and conditions that do not allow or provide for subwoofers on the ground.

Optimised airflow.

The B-Line subwoofers are carefully designed to reproduce the lowest tones with impressive clarity. The air movements in the bass reflex system have been optimised down to the smallest detail to ensure consistent and powerful performance even at the lowest frequencies. This guarantees low-end that completes every musical experience.

Experience B-Line
live now.

Made for every sound reinforcement.

In mobile sound reinforcement, you must always be prepared for various events and plan and implement customised sound solutions in installations. Therefore, our B-Line subwoofers offer not only a powerful foundation but also flexibility and adaptability. From compact models for small and medium applications to powerful subwoofers for large stages. With the B-Line, we always have a perfect solution for a system setup.

The B-Line

15" – The Space-Saver

The most outstanding feature of the models with a **15" woofer** is their **easy handling** during setup and transport, combined with **impressive output performance** in operation. By the way, this 15" subwoofer is available not only in the **passive** version B 15 **and** the model B 15A **with integrated amplifier and DSP** but **also as a flyable version** B 15A FS. Thus, you can have **real bass** even in a flown system.

Size	15"
Voice Coil	3"
max. SPL	up to 136 dB
Load Capacity (passive)	1,600 watts peak
Power (self-powered)	800 watts Class-D Amp

18" – The Golden Middle

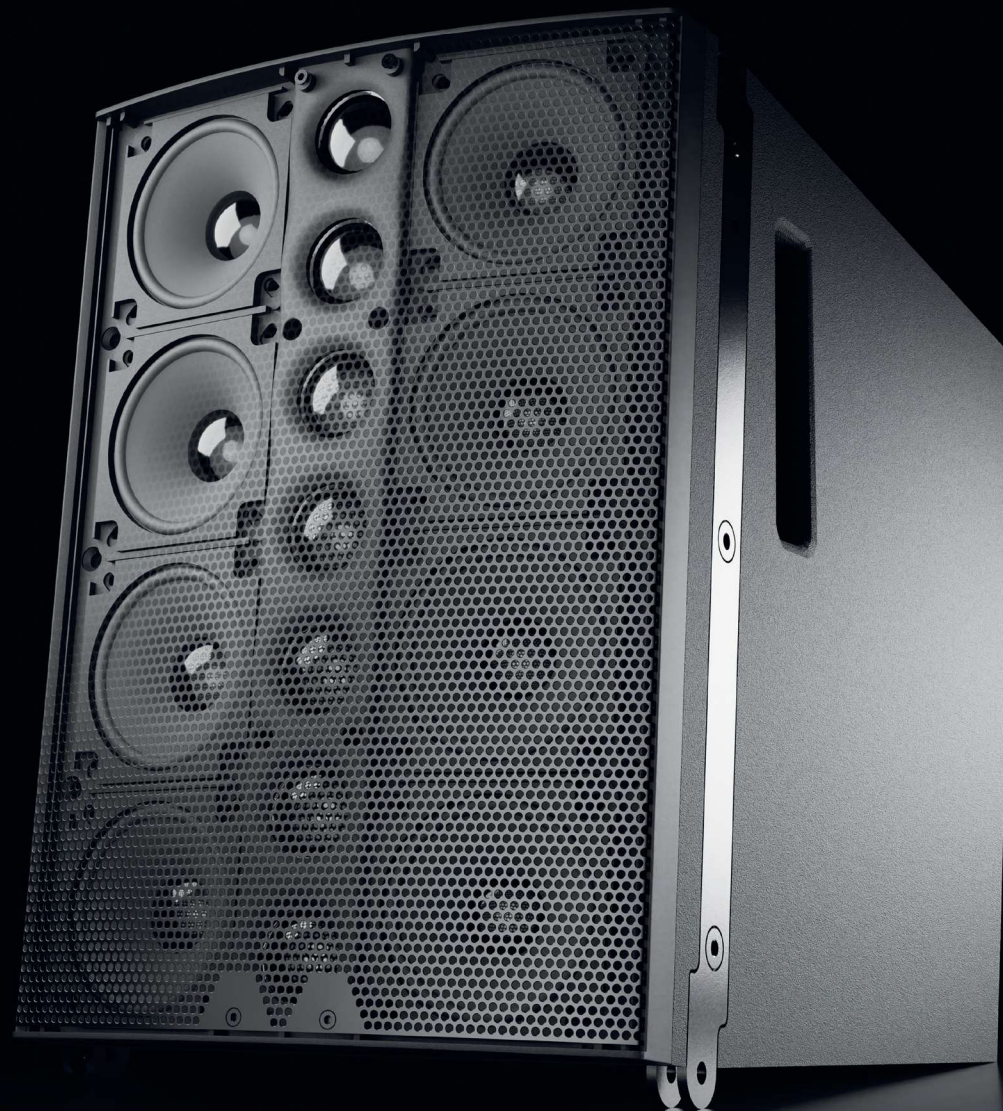

The **18" woofer**, in combination with the strong **4" voice coil**, achieves **up to 138 dB max SPL** and reaches **down to 29 Hz**. The passive **B 18 can handle up to 2,400 watts (peak)**, and the **B 18A with an integrated amplifier and DSP is driven by 1,600 watts**. **Ergonomically optimised handles** on each side ensure quick and safe transportation and setup of the subwoofer.

Size	18"
Voice Coil	4"
max. SPL	up to 138 dB
Load Capacity (passive)	2,400 watts peak
Power (self-powered)	1,600 watts Class-D Amp

Perfectly Equipped.

The M-F3A PRO is an ideal complement to the B-Line, developed for a harmonious sound balance between deep basses and clear highs. Its compact dimensions make it the perfect choice for professional installations and mobile sound reinforcement.

Together, the M-F3A PRO and B-Line offer a perfect listening experience.
